

# DELTA LIGHTNING ARRESTORS™

The Delta LA Series handles the big surges, like lightning up to 50,000 amps, passing them harmlessly to ground.

Just put it in your box.

The Delta CA Series handles the small surges, like harmful voltage spikes up to 6000 volts, protecting delicate electronic devices.

Just put it in your box.

While it is not possible to achieve one hundred percent protection, Delta units will greatly reduce problems due to lightning, power surges, and spikes. Using both units will protect against both high and low energy surges.
